

This assisted care living facility heard about Thermo-shield but needed proof....

Logan house is a very large complex that includes 100+ senior living apartments. Energy costs are now extra high and a big concern.

**Each apartment
has 1 bedroom, a
kitchen-dining
area, full bath,
and living room**

Each apartment has it's own furnace which the seniors like set at 85 degrees winter, summer, fall, and spring. We brought in a licensed electrician and HVAC contractor who set up electrical consumption meters in two identical apartments. In one apartment Thermo-shield Interior was used on ceilings and exterior walls only. The other, regular paint.

**The Thermo-shield apartment use's
37% less energy to heat.**

Logan House will do 85 units starting spring 07 !
